CAREER OBJECTIVE

Aspiring Python Developer and Cybersecurity undergraduate with hands-on experience in Python programming, OOP, web technologies, and machine learning. Proficient in building web-based applications, implementing logical problem-solving solutions, and applying core security principles. Eager to contribute to a software development or cybersecurity team, grow through real-world engineering challenges, and deliver reliable, scalable software solutions.

EDUCATIONAL QUALIFICATION

Saveetha Engineering College <i>B.Tech in Computer Science and Engineering (Cyber Security); CGPA: 7.8/10.0</i>	Chennai, Tamil Nadu <i>Sep 2023 – Present</i>
Dr. B S R Junior College <i>Intermediate (MPC); Percentage: 96.3%</i>	<i>Jun 2021 – May 2023</i>

INTERNSHIP AND TRAINING

Machine Learning Intern <i>Retech Solutions Pvt. Ltd.</i>	Jan 2025 Chennai, TN
- Built an end-to-end Python-based machine learning pipeline focused on privilege escalation attack detection and mitigation in cloud environments, gaining hands-on experience with applied ML concepts. - Worked on real-world project execution covering data preprocessing, feature engineering, and model development using Python and Scikit-learn, demonstrating ability to deliver functional ML solutions within a professional setting.	
Web Development Intern (In-Plant Training) <i>Kairos Corporate Services</i>	Jul 2024 Hyderabad, Telangana
- Gained hands-on exposure to real-world development workflows, strengthening practical understanding of end-to-end web application systems including frontend design and responsive layouts. - Worked with HTML, CSS, and core web technologies to build and contribute to live web projects, reinforcing practical skills in version control and collaborative development using Git and GitHub.	

PROJECTS COMPLETED

FinCell — Smart Lost Device Tracking System <i>Flutter, Firebase, Kotlin, OpenStreetMap</i>	2025
- Built a real-time cross-platform (Android + Web) device tracking system using Flutter and Firebase Firestore with secure code-based location sharing. - Implemented an Android Foreground Service in Kotlin for persistent background GPS tracking with accuracy filtering and reliable real-time updates even when the app is closed. - Optimized Firestore performance using write throttling and integrated a remote alarm trigger for lost-device security control.	
Alzheimer's Disease Detection using Graph Neural Networks <i>Python, PyTorch, GNN, MRI Analysis</i>	2025
- Developed a multimodal Alzheimer's disease detection system using structural MRI data and Graph Neural Networks for early-stage cognitive impairment classification. - Constructed brain-region graphs from MRI scans using Harvard-Oxford atlas-based ROI extraction and implemented Graph Attention Networks (GAT) for disease prediction. - Performed data preprocessing, feature engineering, graph construction, and model training on medical imaging datasets to improve diagnostic accuracy.	
AI-Powered Attack Path Prediction System <i>Python, Machine Learning, Cyber Security, Graph Analytics</i>	2025
- Designed an intelligent cybersecurity platform to predict potential attacker movement across enterprise networks before exploitation occurs. - Modeled attack paths using graph-based representations of assets, vulnerabilities, and privilege relationships to identify critical security risks. - Developed predictive analytics workflows to simulate attack scenarios and generate proactive mitigation recommendations.	

TECHNICAL SKILLS

Languages & Core: Python (OOP, scripting, automation), C, SQL, Kotlin (basics)

Mobile & Web: Flutter, HTML, CSS, Firebase Firestore, REST APIs

Core Concepts: OOP, Data Structures & Algorithms, Real-Time Systems, Cybersecurity Fundamentals

Tools & Platforms: Git, GitHub, Kali Linux, Android (Foreground Services)

Python & ML: Scikit-learn (basics), Machine Learning concepts

Currently Learning: Flask, REST API development, Network Security

CERTIFICATIONS

Foundations of Cybersecurity — Coursera, Google (2024)

Python Foundation Certification — Infosys Springboard (2026)
